

Sprintform AI Coaching Report

Computer vision sprint/jump mechanics analysis

Detector	synthetic-fallback
Frames	24
Duration	958 ms
Average trunk lean	15.41 deg
Peak ankle separation	0.47
Knee angle range	157.25 - 179.43 deg

Limitations

2D single-camera measurements are normalized image estimates, not lab-grade biomechanics.
Camera angle, lens distortion, clothing, occlusion, and frame rate affect metric reliability.
Use the output for coaching review and engineering demonstration, not medical diagnosis.
